

Test Description

You are tasked with creating a simple REST API using Laravel framework with two endpoints:

1. **Create User API**
2. **Get Users API**

Requirements

1. Create User API

Endpoint: POST /api/users

Request Input:

- email (string, required, valid email format)
- password (string, required, minimum 8 characters)
- name (string, required, 3–50 characters)

Functionality:

- Insert a new record into the users table.
- Send two emails:
 - i. To the new user confirming their account creation.
 - ii. To the system administrator notifying them of the new user.
- Return a response containing details of the newly created user (excluding the password).

Response Example:

```
{
  "id": 123,
  "email": "example@example.com",
  "name": "John Doe",
  "created_at": "2024-11-25T12:34:56Z"
}
```

2. Get Users API

Endpoint: GET /api/users

Request Input:

- search (string, optional, search by name or email)
- page (integer, optional, default: 1)
- sortBy (string, optional, possible values: name , email , created_at)

Functionality:

- Retrieve a paginated list of **active users** from the `users` table.
- Filter results using the `search` parameter (matches name or email).
- Sort results based on `sortBy`. Default sorting: `created_at`.
- Exclude the `password` field in the response.
- Include an additional field `orders_count`, which represents the total number of orders for each user.
- Include an additional field `can_edit` that reflects whether the currently logged-in user can edit each specific user.

Rules for `can_edit`:

- Administrator: Can edit any user.
- Manager: Can only edit users with the role `user`.
- User: Can only edit themselves.

Response Example:

```
{
  "page": 1,
  "users": [
    {
      "id": 123,
      "email": "example@example.com",
      "name": "John Doe",
      "role": "user",
      "created_at": "2024-11-25T12:34:56Z",
      "orders_count": 10,
      "can_edit": true
    },
    {
      "id": 124,
      "email": "another@example.com",
      "name": "Jane Smith",
      "role": "manager",
      "created_at": "2024-11-24T11:20:30Z",
      "orders_count": 5,
      "can_edit": false
    }
  ]
}
```

Database Structure

`users` Table

Column	Type	Constraints
<code>id</code>	INT	Primary Key, Auto Increment
<code>email</code>	VARCHAR(255)	Unique, Not Null
<code>password</code>	VARCHAR(255)	Not Null
<code>name</code>	VARCHAR(255)	Not Null

Column	Type	Constraints
role	ENUM	Default: user
active	BOOLEAN	Default: true
created_at	DATETIME	Default: Current Timestamp

orders **Table**

Column	Type	Constraints
id	INT	Primary Key, Auto Increment
user_id	INT	Foreign Key (users.id)
created_at	DATETIME	Default: Current Timestamp
